**This contemporary designer fireplace
will be the heart of your home.**

Designed to be both efficient and
a functional piece of art, whether
operating or a static fireplace, the Silo
Suspended Fire does more than just
heat well.

Available in four fuel options:

Wood, Gas, Bio-Ethanol or Electric.

Talk to us about the best solution
for you. All Naked Flame suspended
fireplaces are individually
handcrafted, so all possess unique
and bespoke qualities, both
perfections and imperfections, to
ultimately create a unique design
statement, that whilst beautiful, also
is very functional.

XL700 Biofuel burner weight: 9.2KG

As most businesses start, there is a vision.
Ours is to create stunning fireplace solutions that are built to last.

At Naked Flame we have always had a keen interest in design. In particular where form meets function, where great design meets practical use.

Bending and blending the rules of design is what drives us. It drives us to create fires that are not only beautiful but functional too.

All too often the phrase "designer product" carries a hefty price tag, which is not really kiwi, and certainly not us.

That's why we have always strived to make the product quality as high as possible, yet keep the cost as low as possible.

Richard Lee - Founder and designer.
